

LATEST TREATMENT ADVANCES

The **clear alternative to metal braces**. By using a series of clear removable aligners, Invisalign straightens your teeth with results you'll notice sooner than you think.

The course of treatment involves changing aligners approximately every two weeks, moving your teeth into straighter position step by step, until you have a more beautiful smile. And unlike braces, these clear aligners can be removed while you eat and brush your teeth as usual.

Digital X-Rays

This **new, safer technology** markedly reduces radiation exposure and is available to all our patients.

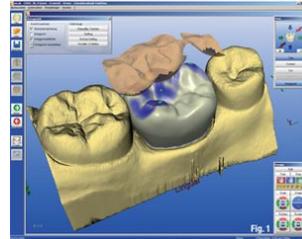

This advanced system allows us to display your **digital x-ray images almost instantly on a computer screen** without the delay of film processing in a darkroom. This eliminates the need to use toxic chemicals which helps to **protect the environment**.

Digital X-Rays use **80 to 90 percent less radiation** than conventional x-rays. Thus the possible harm and hazard from dental x-rays have all but been eliminated.

CAD/CAM DENTISTRY

A new choice to consider...

CAD/CAM is a revolutionary way to **restore** damaged **teeth** in a **single visit!**

- 3D software helps us design a restoration from the "optical impression" photo
- CAD/CAM processes and mills the restoration from a solid block of tooth colored material
- The restoration is bonded to the tooth using state-of-the-art adhesive dentistry
- You can have beautiful and durable results in one comfortable visit

What can dental CAD/CAM be used for?

CAD/CAM is a revolutionary way to **restore** damaged **teeth** in a **single visit!**

- ...inlays, onlays, veneers
- ...partial and full crowns
- ...tooth-color fixed bridgework

Dental Insurance Benefits Apply

This new technology will save you time, more of your original tooth, with convenience and comfort!

ENHANCED APPEARANCE

Make your smile a masterpiece!

Does your smile need updating?

Your teeth can be the most striking feature on your face. With advances in dentistry, you need not have stained, chipped or misshaped teeth. Comfortable treatment, often in one visit, can improve your smile!
